KYRO

KNOWLEDGE YIELDING RESOURCE OPTIMIZER

SCHOOL INTELLIGENCE PLATFORM · BETA INVITATION

One intelligent layer above everything your school runs.

KYRO is a school intelligence platform. It reads across your finances, enrollment, staffing and more, then hands it to **Penny, your AI chief of staff**, who turns it into board-ready reporting and a single daily briefing your leaders can act on. It connects to the systems you already use and sits above them — your accounting, your student-information system, and your payroll all stay exactly where they are.

What it is

Your financial data lives in one system, enrollment in another, staffing in a third — and the work of pulling them together into something you can act on falls to people who have better uses for their time. **KYRO does that work instead.** Every night, Penny — the AI at its center — reads across your school and surfaces what needs you.

WHAT IT LOOKS LIKE ON A MONDAY MORNING

◆ PENNY · DAILY BRIEFING · 7:02 AM

Good morning. Three things require your attention.

- Enrollment is down six students from projection.
- Cash will fall below target in November.
- Two scholarship reconciliations are outstanding.

Finance committee meets Thursday.
Board packet is 92% complete — seven documents still outstanding.

A reporting tool hands you the numbers and leaves the thinking to you. **Penny has already done the sorting** — and tells you what needs a decision today.

What the platform covers

The full platform connects eight areas of school life, built on five engines that handle the money, the planning, the governance record, the movement of work, and the institution’s documents and memory.

- **Finance**
- **Enrollment**
- **HR**
- **Facilities**
- **Governance**
- **Advancement**
- **Accreditation**
- **Strategy**

Every module unlocks free for the length of the beta — including new ones as they ship. The two below are furthest along and lead the way today:

Financial Intelligence LIVE

It connects to your accounting system, maps your chart of accounts to a common structure, and produces reporting you can take to a board or finance committee without rebuilding it by hand each month. Every figure traces back to the transaction behind it — so anything on screen can be defended in a meeting.

- Budget against actual — by school and in total
- Cash position and the forecast ahead
- Variances flagged before they become problems
- Board and finance-committee reporting that assembles itself

Scholarship Management & AUP Readiness LIVE · SHAPED IN BETA

Scholarship funds are handled as a tracked program, not a spreadsheet exercise. Awards, disbursements, and student-level allocations are recorded as they happen and reconciled against both the funding organization and your ledger — so the annual agreed-upon-procedures engagement becomes a review of work already done, not a year rebuilt under time pressure while the auditor waits.

- Awards and disbursements tracked by student and by program
- Reconciliation between funding-organization records and your ledger
- Supporting documentation attached to each transaction
- Schedules prepared in the exact form the engagement calls for
- An audit trail from any figure back to its source

What comes after

The same foundation extends to planning, governance, workflow, and institutional knowledge — strategic plans tracked against the live figures, board packets assembled rather than compiled, approvals on a schedule, and accreditation evidence gathered through everyday work.

The invitation

What we ask of a beta school

- Access to your accounting and scholarship data
- A named contact who knows your finances
- Honest feedback on what works and what does not

You are shaping the product, not receiving a finished one.

What you get

- Every module unlocked free for the full beta — your reporting and scholarship reconciliations built and running
- Direct access to the people building it
- Real influence over what the platform becomes

Your data is protected — and it always stays yours.

✓ **FERPA-compliant** ✓ **End-to-end encrypted** ✓ **Two-factor authentication**

✓ **Hosted on AWS · United States** ✓ **Export or delete anytime**

A limited number of schools. Built with you, not just for you.

We are inviting a small group of schools to help shape KYRO from the inside.
